

www.SouthernDataStream.com

We are offering opportunities to qualified international and American students, as well as cooperation to companies and agencies that are involved in taking on them.

The location for this training program is the town of LaBelle in Hendry County, an agricultural region of interior south Florida.

During the past 5 years, we have hosted more than 190 young professionals from more than 50 nations throughout the world as part of a water resources internships program.

(See www.Intellitemps.net/former.htm)

The participants are recruited from a wide range of disciplines, such as Engineering, Computer Sciences, Natural Sciences, Journalism, Marketing, Administration, Social Sciences and Education.

The program is managed as a short-term experience (mainly 3 to 6 months) with the number of participants limited to 20. This allows students and recent graduates to participate through direct work experiences in various assignments, while combined with tours, seminars and community involvement, focusing on democratic values and ethics.

www.SouthernDataStream.com

Design and development of automatic water samplers

The project involves the design and assembly of a composite water sampler housing and associated mechanical components, using off-the-shelf components (relays, pumps, solenoid valves).

Telemetry and database systems development

This internship develops low-cost telemetry systems, integrating delivered data with online databases and project management websites, visiting by technicians on a weekly or monthly basis.

Grant writing

It requires a self-motivated, aggressive person seeking to learn the how-to's of grant writing and team building.
